Group 1: Advantages

- Automation: AI can automate repetitive and mundane tasks, freeing up time for more creative and strategic work.
- Efficiency: AI can process vast amounts of data quickly and accurately, leading to increased productivity and efficiency.
- Personalization: AI can be used to personalize experiences for customers, users, and patients, leading to improved outcomes and satisfaction.

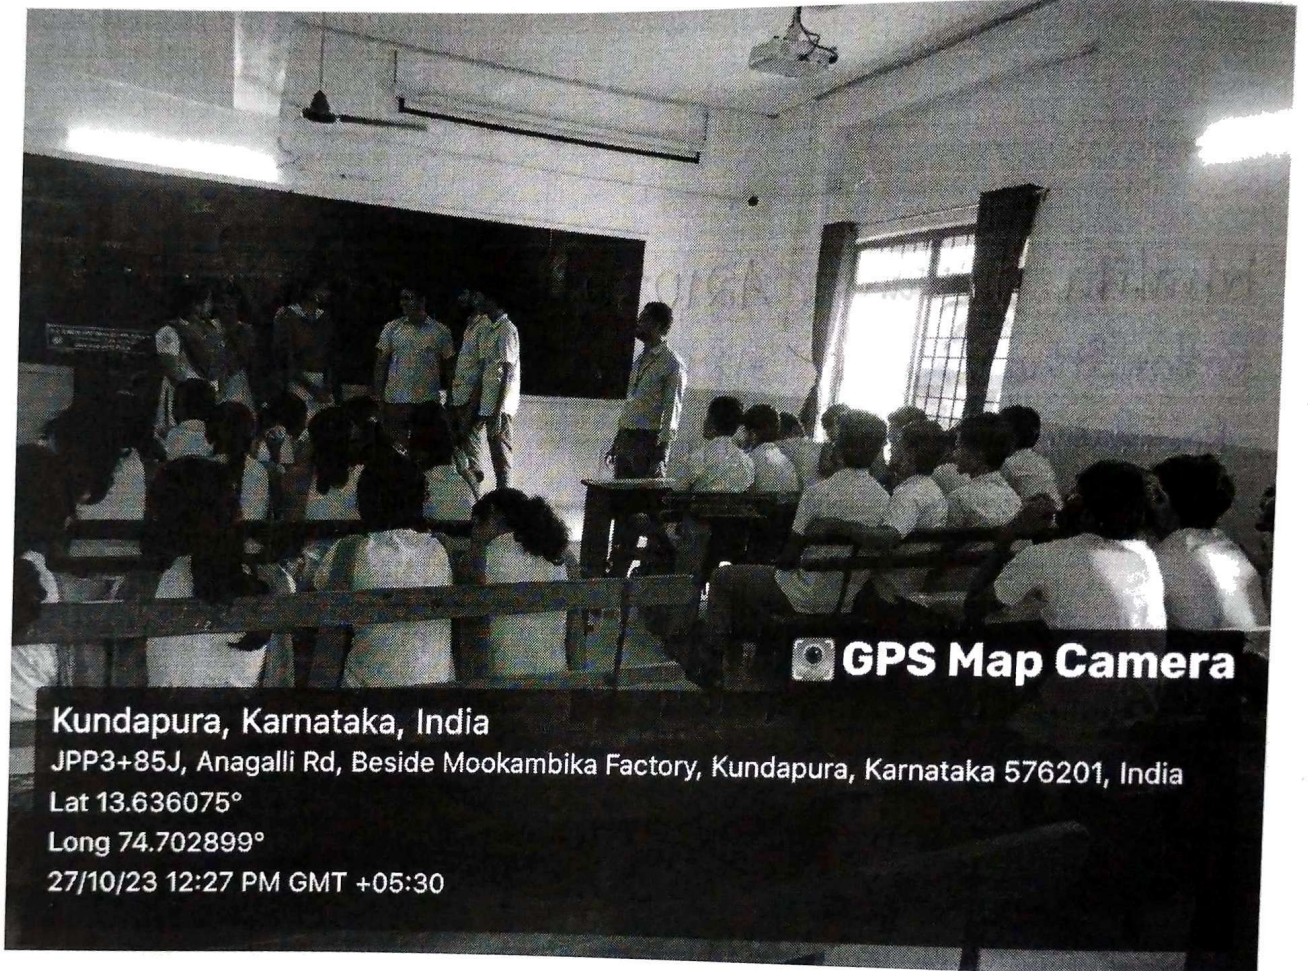

Group 2: Disadvantages

- Job displacement: AI has the potential to automate jobs that are currently done by humans, leading to job displacement.
- Bias: AI can perpetuate biases and discrimination if it is trained on biased data.
- Privacy: AI systems often require access to large amounts of personal data, which can raise concerns about privacy and data protection.
