Topic: Normalization in DBMS

Name	Roll no	Signature
Sinchana. Shetty	BCA 22060	
Keerthi k Shetty	BCA 22 020	
Krishnaprasad	BCA 22021	

Abstract:

Normalization in database management systems (DBMS) is a process of organizing data to reduce redundancy and improve data integrity. It involves structuring a database according to certain rules and principles, which helps to ensure that the data is stored efficiently and can be easily retrieved and managed.

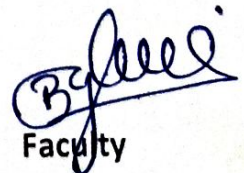

- The students of Second II BCA-A have presented the seminar on the above-mentioned topic.
- Seminar lasted for an hour with creative examples and students get clear idea about the characteristics of OOPs.

Topic: Exception handling in C#

Name	Roll no	Signature
Subramanya	BCA22063	
Vaishnavi M.S	BCA22127	
Aishwarya	BCA22070	

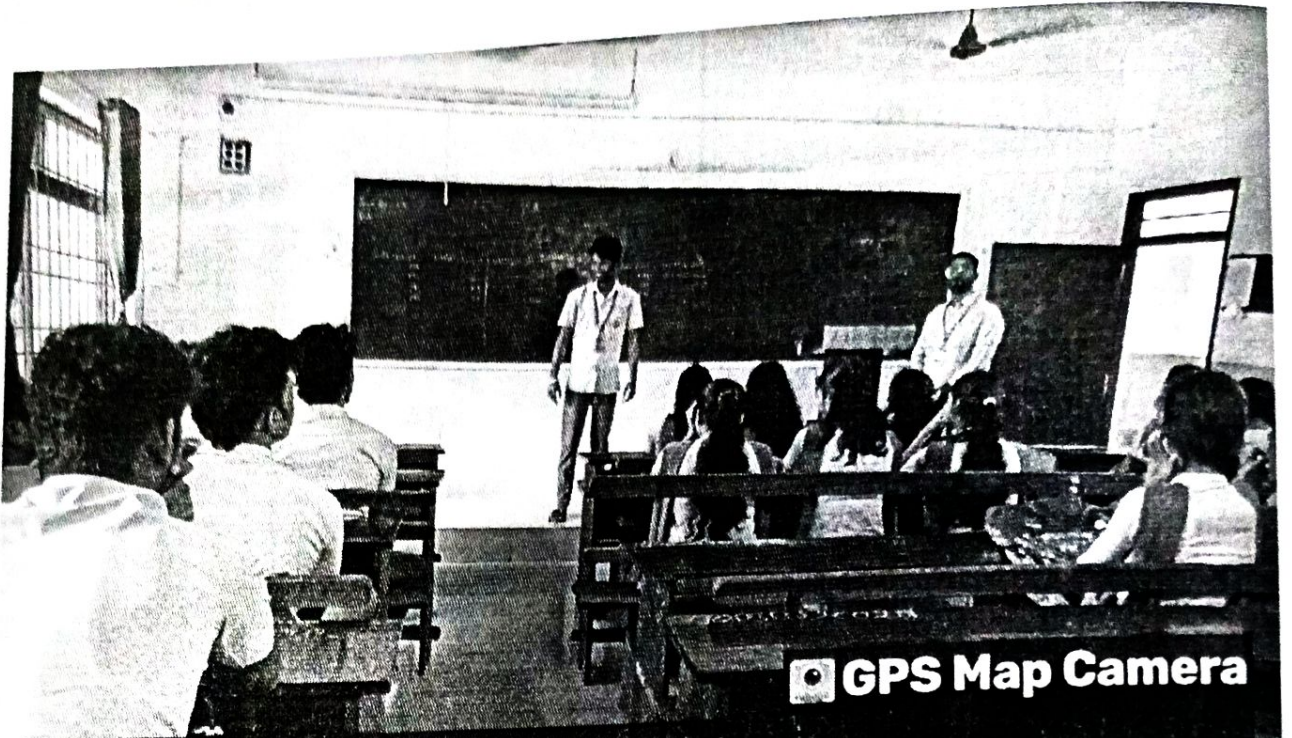

Abstract:

Exception handling in C# is a critical mechanism for managing runtime errors and maintaining the normal flow of an application. It enables developers to handle exceptional conditions (errors) that may occur during the execution of a program, ensuring that these conditions do not lead to unexpected program crashes or unpredictable behaviour.

- The students of Second II BCA-A have presented the seminar on the above-mentioned topic.
- Seminar lasted for an hour with creative examples and students get clear idea about the framework for handling exceptions through the use of try, catch, finally, throw, and throws keywords.

**Abstract:**

Database Management System (DBMS) offers several advantages that significantly improve the management and utilization of data within an organization. DBMS plays a crucial role in modern information systems by providing a structured and efficient way to store, manage, and access data. Its adoption leads to improved data management practices, enhanced decision-making capabilities, and better overall organizational efficiency.
